QUALITY CONTROL TECHNICIAN

INLAND CONCRETE is seeking a **QUALITY CONTROL TECHNICIAN** for its Kearl Lake oil sands project near Fort McMurray, Alberta. Reporting to the Project Manager, this position will be responsible for providing concrete quality control and technical support for this project.

Some responsibilities include:

- Field testing of raw materials, concrete production, and finished products to maintain quality standards
- Providing ongoing technical support to the operations and customers
- Assisting with maintaining cost efficient mix designs and track performance
- Resolving quality issues to maintain high levels of customer satisfaction

The successful candidate should possess the following skills and qualifications:

- Technology diploma in Civil Engineering
- Proficient computer skills for quality control and mix design analysis
- Materials testing training including ACI Testing is an asset
- Experience in the concrete or aggregates industry
- Strong analytical, interpersonal, and customer service skills

Living arrangements for these positions will be provided through on-site camp services. Interested and qualified candidates may direct their resume by May 7, 2010 in confidence to:

JobOpps-Canada@lehighcement.com

*We appreciate the interest of all applicants, however,
only those selected for interview will be contacted.
No agencies please.*
